

\$PYRX is an ERC-20 token operating on the Ethereum blockchain, designed to offer a more stable and secure investment option. Available exclusively through our website, it provides a centralized exchange (CEX)-style experience, minimizing exposure to the higher risks associated with volatile trading environments typically found on decentralized exchanges (DEX). Additionally, users can participate in our Earn Pyrands feature, where they can complete surveys in exchange for \$PYRX rewards. This system provides an easy and interactive way to grow holdings without the need for additional investment, making it a valuable tool for both new and existing holders. With its rewarding ecosystem and focus on stability, \$PYRX offers a unique way to engage in crypto while benefiting from consistent growth opportunities.

Pyraday is a unique monthly event hosted by Pyrand, where investors are given the opportunity to cash in on their holdings directly through the project's website. This structured selling window allows for controlled liquidity while minimizing the risks of continuous market sell-offs.

### **Key Features:**

#### **1. Surprise Liquidity Event:**

Pyraday occurs on a different day each month and is only announced on the day it takes place. This element of surprise builds excitement and keeps investors engaged with the project.

#### **2. Investor Cash-Out Opportunity:**

On Pyraday, investors are given the exclusive chance to sell their holdings directly through Pyrand's website, offering a way to realize profits.

#### **3. Price Increase around Pyraday:**

To reward long-term holders, token prices are strategically increased around Pyraday, ensuring that those who remain committed to the project benefit the most.

#### **4. Market Stability:**

By concentrating selling activity into a single, controlled event each month, Pyraday minimizes market volatility and supports the project's long-term growth.
